Python can be used to pull and analyze financial data to inform your investment decisions:

import yfinance as yf

# Fetch data for your stock of interest (for example, hypothetical ticker 'PENNY')
ticker = 'PENNY'
stock = yf.Ticker(ticker)

# Get historical market data
hist = stock.history(period="1y")

# Calculate moving averages
hist['MA20'] = hist['Close'].rolling(window=20).mean()
hist['MA50'] = hist['Close'].rolling(window=50).mean()

# Display last few entries
print(hist[['Close', 'MA20', 'MA50']].tail())
```

\*Remember: Replace 'PENNY' with the actual stock ticker. Also, appreciate the compliance with data use policy and be sensitive to the date range and intervals.\*
